## Lifting Table **LT500**

Scanclimber LT500 is a lifting table which is used to transport and lift construction material to the mast climbing work platform (MCWP). This is a very popular product among the users of Scanclimber's MCWPs. It has a payload capacity of 500 kg and it can lift the materials to a height of 0,3 - 1,6 meters. The LT500 moves up and down with the help of a chain winch or an integrated hydraulic unit.

## General

LT500 is a lifting tool which is used as an extension to a working platform for transporting the materials from the ground to the platform. MCWPs have minimum loading height over 1 meter because of the wheels and chassis beneath the platform. Hence there is a requirement for another lifting tool to load the necessary components or materials to the platform from the ground. LT500 has loading flaps on both sides. The adjustable outriggers make it a very efficient tool to use on uneven surfaces. The railings on all sides ensure the safety of the material loaded on to the platform and the wheels facilitate lifting table's horizontal movement. The LT500 is moved up and lowered down with a hydraulic unit or electrical chain winch. (both options are available). As the name suggests, the LT500 can lift a maximum of 500 kg at a time.

LT500 is simple modular designed, light in weight, easy to use and compatible with all the mast climbers we have to offer.
